

MIDNIGHT WATER SOFTENER—DESIGNED FOR EVERYDAY LIFE!

- ✓ **Modern, clean exterior and advanced, feature-rich interior.** The beautiful midnight black color gives a real feeling of luxury, even in the most central rooms of the house.
- ✓ The **WiFi control valve** establishes a permanent connection with our new, high-end water softener and its user. With the help of the phone application specially designed for the Euro-Clear Midnight water softener, all important information can be checked with one click, such as the length and time of the regeneration, or the amount of water flowing through.
- ✓ The Midnight water softener is equipped with the **SafeHOME function**. What does this feature mean? The water softener monitors the amount of water flowing through it and the current water flow, from which values it can infer possible pipe breaks and water leaks in the water network. If necessary, the Midnight water softener intervenes to prevent possible pipe breaks and water damage. The system can be supplemented with an additional, optional floor drain, which increases the effectiveness of protection against water damage.
- ✓ The disinfection unit of the resin bed of the Midnight water softener performs the disinfection of the resin charge during regeneration, this is also known as the **BIO disinfection function**. By using the resin bed disinfectant during regenerations, the device not only uses Na⁺ from the salt tablet (NaCl), but also disinfects the resin bed by using Cl⁻ during each regeneration. In almost all Western European countries, water softening equipment can only be sold with a resin bed disinfection unit!
- ✓ The Midnight water softener has a **salt shortage alarm** function, which uses an internal calculation based on the amount of salt loaded to calculate when the salt loaded into the equipment will run out, and then sends an alarm warning to refill the salt.
